* for a limited period

Clean Air

AIR PURIFIERS

You can't see air in a room or office.

But you can feel the effects of dust, pollen, allergens, germs and odours in that air.

Rather than dragging air to the device,

removes the problem by treating the air around you.

Place the battery-operated Cleanaer units discreetly in the rooms most affected.

How it works

Cleanaer releases millions of Liquidlons in short bursts every two minutes, 24 hours a day.

These Liquidlons float around on the natural air currents patrolling for unwanted particles. The Liquidlons attract airborne contaminants and combine with them in the air, bringing them to the surface and rendering them inactive.
